Hojin Chon

Data / Business Analyst

https://asiwish0506.github.io/resume/en/

Data Analyst with over 10 years of experience specializing in translating complex business challenges into data-driven solutions. Built a strong foundation in KPI design and dashboard operations, delivering high-impact analytics across S&OP, CRM, and web/app product domains at top-tier tech platforms including Woowa Brothers, Yanolja, and Coupang. Going beyond traditional analysis, frequently stepping into **Project Manager** roles to drive product and business growth. Most recently, led **AI Transformation (AX) and Claude (LLM)-based analytics automation** within the B-mart Marketing Team, significantly boosting data productivity and optimizing marketing operations through innovative internal tools.

Business Analyst	Data Scientist	Business Analyst	Data Analyst	Business Analyst
Domestic Sales HQ / Event Efficiency TF / ICM Team	Data Marketing Team	CRM Targeting Team	Data Analytics Team	Strategy Planning / Commerce Biz Planning / Commerce360 TF / B-mart Marketing Team

EDUCATION

Seoul National University

Aesthetics / Business Administration (Double Major), GPA 3.81/4.3
2008.03 ~ 2015.02

* Business-level English (TOEIC 985; collaborated with a non-Korean team lead at Coupang)

CORE COMPETENCIES

- Strategy & KPI Design
- CRM Planning & Segmentation
- Project Management
- User Funnel Analysis
- A/B Testing Design
- SQL & Python
- Tableau & Dashboarding
- Data Pipeline (Airflow)
- AI Workflow Automation (LLM)

PROFESSIONAL EXPERIENCE

Woowa Brothers

2023.12 ~ Present

Business Analyst

Strategy Planning / Commerce Business Planning / Commerce360 TF / B-mart Marketing Team

- PM Led division-wide AX on Claude (LLM) — planned and ran AI analysis sessions and Claude training, and built reusable SQL workflow guidelines and domain-specific data dictionaries (schemas, join conditions, business terms)
- PM Established a Single Source of Truth (SSOT) for promotional data — consolidated fragmented promotion assets and information, auto-linked to the marketing calendar and performance reports
- PM Automated operational processes end to end — a Slack alert bot, Airflow batches for in-house analytics tables, and automated promotion performance reports
- Built and ran an integrated commerce marketing dashboard ecosystem spanning five channels (inventory performance, traffic, Baemin Club — a subscription/loyalty program — and promotion performance)
- Designed and ran B-mart CRM target marketing (time-limited sales campaigns, win-back, and user adoption) and established regular Baemin Club adoption tracking and monthly customer analysis
- PM Designed company-wide commerce KPIs and led the 'Commerce360' CRM project — drove early wins with a purchase-conversion prediction model **(Revenue +1.93% / Cost -7.59%)**

Claude (Claude Code), MCP, Python, Airflow, Git

1. Leading Claude (LLM)-based division-wide AX & analytics automation

ROLE Led division-level AI adoption planning and enablement, and standardized the analysis workflow

ACTION
- Planned and ran AI analysis sessions and Claude training to onboard the team to AI-assisted work
- Developed SQL workflow guidelines and defined domain-specific data dictionaries (schemas, join conditions, and business terms), so the LLM consistently generates queries that fit our in-house data structures
- Developed automation tools for repetitive tasks, including Slack alert bots for real-time coupon tracking and automated Airflow DAGs for daily temp-table loading and segment pooling
- Built report and dashboard automation pipelines

IMPACT Shortened and standardized the division's analysis and reporting cycle, turning data work once bottlenecked on a single analyst into self-service

Google Sheets·Apps Script, SQL (Trino), Python, Airflow

2. Establishing a Single Source of Truth (SSOT) for promotions and automating performance reports

ROLE Designed a Single Source of Truth (SSOT) for fragmented promotion operations data and automated performance aggregation

ACTION
- Consolidated scattered promotion data (sheets, calendar, coupons, message assets) into a single SSOT database and standardized the promotion / asset mapping schema
- Auto-linked the SSOT-based marketing calendar via Apps Script and unified the operational input process
- Defined standard traffic / conversion / cost metrics in SQL for each promotion and automated per-campaign performance reports via Airflow batches
- Hardened unattended operations with auto-generated report sheets, permission sharing, and retry-on-failure

IMPACT Unified promotion operations data and performance criteria, replacing manual per-campaign aggregation with automated reports

SQL (Trino), Python, Redash, Zeppelin, Airflow, JavaScript

3. Building and operating an integrated commerce marketing dashboard ecosystem

ROLE Defined inventory / traffic / performance metrics and designed the dashboards and data pipelines

ACTION
- Built and operated a five-channel integrated inventory-performance tracking dashboard
- Built and enhanced marketing traffic, Baemin Club, and promotion performance dashboards
- Migrated the traffic query book to Airflow and backfilled the entire traffic table to ensure data consistency

IMPACT Enabled real-time monitoring of channel and promotion performance in a single view, supporting marketing and management decisions

SQL (Trino), Python, Zeppelin

4. B-mart CRM target marketing and customer analysis

ROLE Designed target segments, modeled promotion costs, and ran customer analysis reports

ACTION
- Designed B-mart targeting for time-limited sales campaigns, win-back, and active customers, and modeled promotion costs
- Analyzed Baemin Club adoption, redesigned benefits, and established a monthly customer analysis routine
- Built a coupon-scheme recommendation matrix based on organic-purchase scores and set exclusion thresholds for over-incentivized users

IMPACT Surfaced clear opportunities to improve promotion cost efficiency and market penetration through data-driven targeting

</details>

SQL, Python, Redash, Zeppelin, Airflow

5. Commerce360 project PM & purchase-conversion prediction model

ROLE Set overall project direction, defined key specs, and led cross-functional collaboration

ACTION
- Built the Commerce360 customer DB to underpin future commerce target marketing
- Built a classification model to identify prospects with high purchase likelihood
- Extracted target segments from model scores and executed CRM marketing against them
- Designed and led the first cost-efficiency experiment end to end

IMPACT Drove a **1.93%** MoM increase in revenue while reducing costs by **7.59%** in the initial experiment phase (Dec 2025)

Yanolja

2022.12 ~ 2023.11

Data Analyst

Data Analytics Team

- PM Led in-house A/B testing operations and championed a company-wide experimentation culture
- Analyzed the performance of the domestic-accommodation and Daily Hotel products and proposed strategy
- Improved data accessibility by designing data marts and analytics tables

View detailed projects & achievements (Click)

SQL, Python, Redash, Tableau, Airflow

1. Leading in-house A/B testing operations and establishing an experimentation culture

ACTION
- Established experiment-design guidelines and collaboration processes with POs, engineering, and other stakeholders
- Introduced and operated a layered experimentation system to run many experiments concurrently
- Standardized metrics by building an experiment-results analysis dashboard

2. Building data marts and analytics tables

ACTION Developed and operated analytics databases for the Daily Hotel and Yanolja domestic-accommodation products

IMPACT Raised analysis efficiency within and beyond the team and improved data accessibility

Coupang

2021.02 ~ 2022.06

Business Analyst

CRM Targeting Team

- Defined user-segment strategy for target marketing across Rocket Fresh and other categories
- Enhanced the purchase-propensity model and tuned its parameters
- Improved target-marketing operational efficiency through Airflow / AWS data-pipeline automation
- Delivered additional marketing-focused data analysis and ad hoc support

View detailed projects & achievements (Click)

SQL, Python, PySpark, Airflow, Amazon S3, Tableau

1. CRM target-marketing efficiency & pipeline automation

ACTION
- Automated batch data pipelines for target extraction from source data using Airflow and S3
- Automated the previously manual campaign-target upload process in partnership with the engineering team

IMPACT Cut target extraction and upload time, driving a step-change in operational efficiency

2. Purchase-propensity model improvement & A/B test design

ACTION
- Improved targeting performance by adding variables to and tuning parameters on the existing propensity model
- Proposed heuristic targeting logic for categories where model scores were less effective
- Designed and operated treatment / control groups to run concurrent promotion experiments

ADT Caps (now SK Shieldus)

2020.06 ~ 2021.01

Data Scientist

Data Marketing Team

- Developed a conversion-prediction model to power TM/LMS targeting for Caps Home security products
- Engineered features and built models on integrated SKT-affiliate data
- Streamlined and automated the visualization process for TM sales-log data

View detailed projects & achievements (Click)

SQL, Python

1. ML modeling for security-product upsell / cross-sell targeting

ACTION
- Engineered customer lifestyle-pattern features from integrated SKT-affiliate data across telecom, commerce, and more
- Developed a scoring model to predict customers with high conversion likelihood

2. Improving the TM log-data visualization process

ACTION Cleaned TM log data in SQL and connected it to Tableau, turning previously manual performance aggregation into a live dashboard

IMPACT Cut turnaround time and substantially improved efficiency

Lotte Duty Free

2015.01 ~ 2020.06

Business Analyst

Domestic Sales HQ / Event Efficiency TF / ICM Team

- PM Led an inventory allocation optimization project — optimized allocation of undersupplied products while maximizing contribution margin
- PM Built an automated product-transfer system with an algorithm to resolve inventory imbalances
- PM Event Efficiency TF — designed a duplicate-event monitoring system
- Analyzed company-wide sales data and built Spotfire-based on-site dashboards
- **Impact: the automated transfer system delivered +1.5B KRW in average monthly revenue**

View detailed projects & achievements (Click)

SQL, R, In-house system

1. PM for automated product-transfer system development

ACTION Designed metrics to detect over- and under-stock and logic to compute optimal transfer volumes, and automated the system in collaboration with IT

IMPACT +1.5B KRW average monthly revenue after rollout (as of 2018)

2. PM for product allocation optimization project

ACTION For popular SKUs prone to stockouts, engineered variables around per-channel margin and inventory to maximize contribution margin, and established an optimal allocation strategy

IMPACT +200M KRW average monthly revenue vs. prior ordering (as of H2 2019)

3. Event Efficiency TF

ACTION Defined metrics to assess overlap among promotions run independently by stores, and designed the prioritization logic and a monitoring dashboard
